Dear hiring manager, I am very interested in the Junior software engineer at Fortum.

Throughout my career, I have honed my skills in React, Redux, JavaScript, TypeScript, React-Native, Node.js, HTML, CSS, databases and unit, integration testing with Jest and E2E testing with Cypress, work with AWS and many more!

Furthermore, my experience in collaboration, communication, and critical thinking make me a good team player for your organization.

I have obtained a lot of certificates and completed the Intergify program as one of the best students. I am passionate about coding and curious to learn and get more experience.

Taking all of these into account I believe I am well suited for the role.

I would love to join your team and apply my skills working on interesting projects!

I look forward to your reply!

Thank you

Best regards
Andrei Sorokin
